

KNOVATION
SOLUTIONS

Secure Anywhere

Ensuring continuity,
control and resilience.

As your organisation expands and embraces digital work, your endpoints have become the new front line.

The problem? Traditional perimeter-based security can't keep up. Threats are more sophisticated, employees are everywhere, and IT teams are stretched thin. When a single device is compromised, the impact can be severe.

That's why **Secure Anywhere** from **Knovation Solutions** delivers intelligent, automated protection that scales with your business, keeping every device, connection, and user secure, no matter where work happens.

Intelligent security that works anywhere

Knovation's **Integrated Endpoint Security** platform brings **AI, automation, and zero trust** together to secure your business wherever your people work.

Advanced threat protection

Stop ransomware, phishing, and zero-day attacks before they spread.

Continuous monitoring

Real-time detection and automated incident response.

Unified management

Manage, update, and secure every device from one dashboard.

Zero trust security

Verify every user and device before granting access.

Integrated security that covers it all

Component: What it delivers:

- **Secure Remote Access:** Enterprise VPN with zero trust per-app access
- **DNS Protection Everywhere:** Blocks malicious domains and phishing attempts
- **Advanced Endpoint Security:** Next-gen protection with automated response
- **Mobile Device Protection:** On-device threat detection with privacy built-in
- **Cloud Threat Protection:** Seamless security across your hybrid workforce

This replaces basic VPNs, separate DNS filters, traditional antivirus, and multi-vendor complexity.

Our value promise

Enterprise-grade security with intelligent automation — protecting your business anywhere, without the need for dedicated security experts.

More than a platform: Services that de-risk your rollout

Our Endpoint Services are built for organisations that want smarter, safer, and simpler IT security management; whether cloud, on-premise, or hybrid.

Consulting and pre-sales:

Discovery, design, and proof of concept before you commit.

Implementation and integration:

Managed onboarding, setup, and testing by certified experts.

Knowledge transfer and training:

Empower your teams to run and evolve your environment.

Support that scales:

SLAs, troubleshooting, and escalation assistance when you need it most.

Knovation partners with leading endpoint technologies to ensure that every layer of your infrastructure is protected and optimised.

Next steps:

- Week 1: Risk and remote access assessment
- Week 2: Live demonstration of VPN and DNS protection
- Week 3: Tailored proposal with ROI model
